

RESOURCE RECOVERY

from printer cartridges

Over **55 MILLION** cartridges recycled!

We've helped keep over **20,000 tonnes** out of landfill

Printer cartridges contain plastic, various metals, and ink that are too difficult to recycle in kerbside recycling. We ensure they follow a special process so the program has a Zero Waste to Landfill Guarantee!

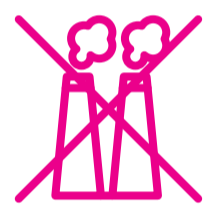

Over **850km of road** has been created from recycled cartridges

Our recycling partners at Close the Loop have developed a product called TonerPlas™ made from recycled printer toner and plastics to make roads. Used on projects, such as the M80 and Monash Freeway, TonerPlas™ based roads are also stronger and more durable.

We've saved over **1 million litres** of printer cartridge ink

This ink can be used in new printer cartridges, pens, and art supplies. It is one of the ways that Cartridges 4 Planet Ark has helped redefine the way we look at resources. It's not waste when it can become something else!

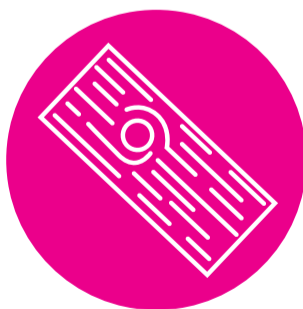

We've diverted approximately **7,000 tonnes of CO₂-eq** from the atmosphere

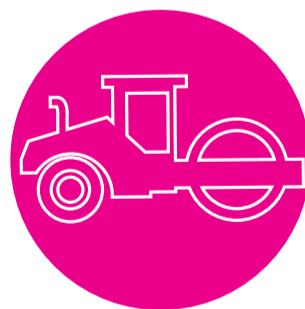

By recycling the components in printer cartridges responsibly, we are reducing the amount of pollution that is produced from digging up new resources and disposing of them in landfill and going to waste.

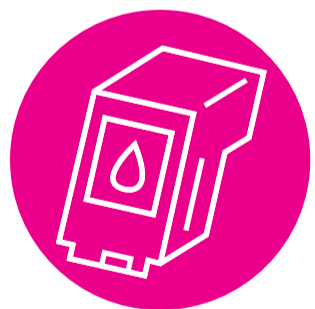

Residual ink is turned into **90% recycled Enviroliner pens and Lousy Ink art supplies**

Mixed and contaminated plastics are made into **eWood, a timber replacement**

Residual toner is used in **TonerPlas™ asphalt additive for stronger roads**

Some manufacturers take back their cartridges make them into **new cartridges**
